STYLEman365 BI

Management KPIs

STYLEman365 ERP holds a wealth of information about your business operation, and provides reporting tools for managing the business. STYLEman365 BI extends this functionality, allowing the data to be explored in an interactive way to spot underlying trends and curiosities – it shows you what you can't see from looking at reports.

To help you get started, STYLEman365 BI comes with a set of default dashboards for Stock, Orders, Sales, Purchasing and Customer activity. These are available to all authorised STYLEman365 ERP users, are accessed directly from STYLEman365 ERP Menus and appear as data tabs within the application.

Should you want to refine these dashboards, create your own or include data from other sources, STYLEman365 BI Professional allows you to customise and extend the standard dashboards and queries for your own purposes. These dashboards may then be published to the web for use in a desktop browser, smart phone or even smart watch.

STYLEman365 BI can also create real-time alerts based on events in the STYLEman365 database, such as a large order, credit problem, low margin sale or delayed shipment, and notify personnel concerned by email or alert to their desktop, mobile or smart device.

STYLEman365 BI has a full set of graphical representations for data, and allows them to be linked together as you drill into the data. Line, Bar, Pie, Doughnut, and Area charts are all available, and can be linked and filtered in virtually infinite possibilities. This lets you visualise the data to spot trends and anomalies, and to drill further into the data to investigate. Some example screenshots are shown overleaf.

STYLEman365 BI Standard

STYLEman365 BI Standard is included with licences of STYLEman365 ERP, and also includes a standard sample set of dashboards which are accessible by any authorised STYLEman365 ERP user. They are accessed from, and appear in the ERP application.

STYLEman365 BI Professional

The Professional licence allows a user to clone and modify the sample dashboard, or indeed to create their own dashboards from the Queries provided. The resulting dashboards may be published and shared among Standard users. The Professional licence is aimed at non-technical users, for example those that may have experience of creating reports with a report generator.

STYLEman365 BI Enterprise

Enterprise has all the features of Professional, and additionally allows the user to create their own queries and to access non-STYLEman365 data sources, including other databases and spreadsheets. The enterprise licence also allows for the publishing of Dashboards to the web, for consumption by browsers on desktop or mobile devices. Enterprise also allows the creation of dynamic alerts based on user-defined conditions being met. Users may be alerted through email or via the BI mobile app. This licence is aimed primarily at users with a good understanding of databases and table relations.

Summary

STYLEman365 BI blends millions of rows of data from STYLEman365, and renders the results for the web, mobile and desktop. Live alerts can be configured and delivered to mobile or other devices in real time. STYLEman365 BI means live intelligence about your organisation, created and published by business users in minutes.

STYLEman365 BI Functionality
